Hello Team,

This email serves as the formal invitation for our Week 7 Laboratory Activity: Online Meeting Workflow. Our group will be conducting a 15–30 minute roleplay session simulating a high-stakes "Scam Call" scenario. Do not forget to document this invitation and reply with **"Accept"** or **"Confirm"** to satisfy the lab's proof-of-invitation requirement.

Meeting Details:

- Date: Saturday, February 7, 2026
- Time: 6:00PM – 8:00PM
- Platform: Google Meet
- Video call link: <https://meet.google.com/tjy-adxs-abt>

Roleplay Context:

We are simulating an "International Investment Opportunity" pitch. The objective is to demonstrate professional virtual coordination while navigating a fraudulent social engineering scenario. Each member has been assigned a specific role (Head Scammer, Lead Scammer, IT Whistleblower, Legal Consultant, and various Victims) to showcase diverse online interactions.

See you in the Meet!

Best regards,

Alfred Glic B. Legario
Host / Head Scammer

Victim #2	Ryan Christopher Lim
Victim #3	Tristan James Cabato
Victim #4	Kenji Takenaka

4. Short group reflection (150–200 words)

Our group meeting was planned around the "Sapphire Philippines" VIP briefing script, where we assigned specific roles to simulate the mechanics of a modern financial scam. We utilized a structured cast that included the high-pressure Host and Lead Scammer to drive the narrative, while the IT Whistleblower and Legal Consultant provided the necessary intervention. By dividing the victims into distinct archetypes like the "Skeptic" and the "Rich Wannabe," we were able to showcase how different personality types react to fraudulent pressure.

One of the primary challenges we encountered was balancing the persuasive talking of the scammers with the emotional reactions of the victims. Coordinating the timing between the Skeptic questioning the SEC registration and the Whistleblower delivering the intervention required cues to keep the roleplay from becoming chaotic.

Through this online collaboration, we learned that digital platforms are easily manipulated to create a false sense of legitimacy, such as using fake ROI charts or spoofed VPNs. We also realized how critical technical and legal literacy is in identifying cybercrime, specifically regarding Republic Act No. 10175 and the penalties associated with online Estafa.
