

Main Prompt:

Create a one-page website for a personal portfolio based on the content from this website:
<https://nijika.de/>

Include these sections:

Home, About Me, Skills, Projects, Contact, disregard other sections from the reference site.

Make it responsive for both mobile and desktop, and make it visually appealing by keeping a consistent color palette and clean font choices.

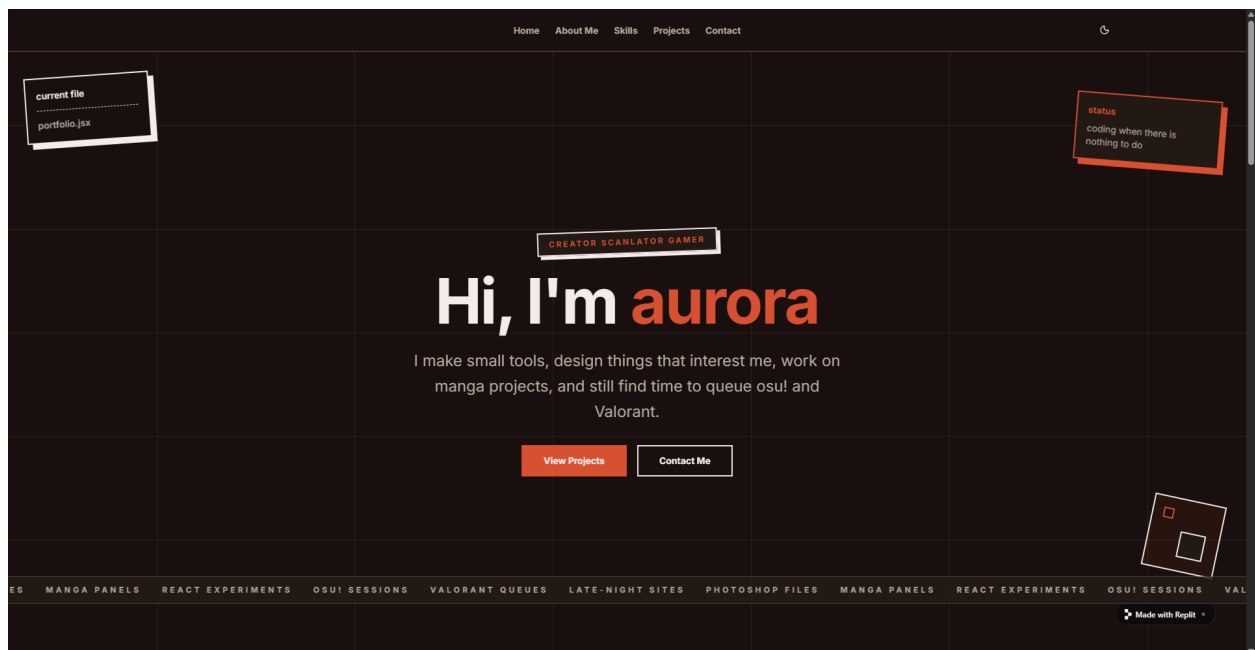

Avoid using glows on components and use minimal animations (does NOT mean NO animations)

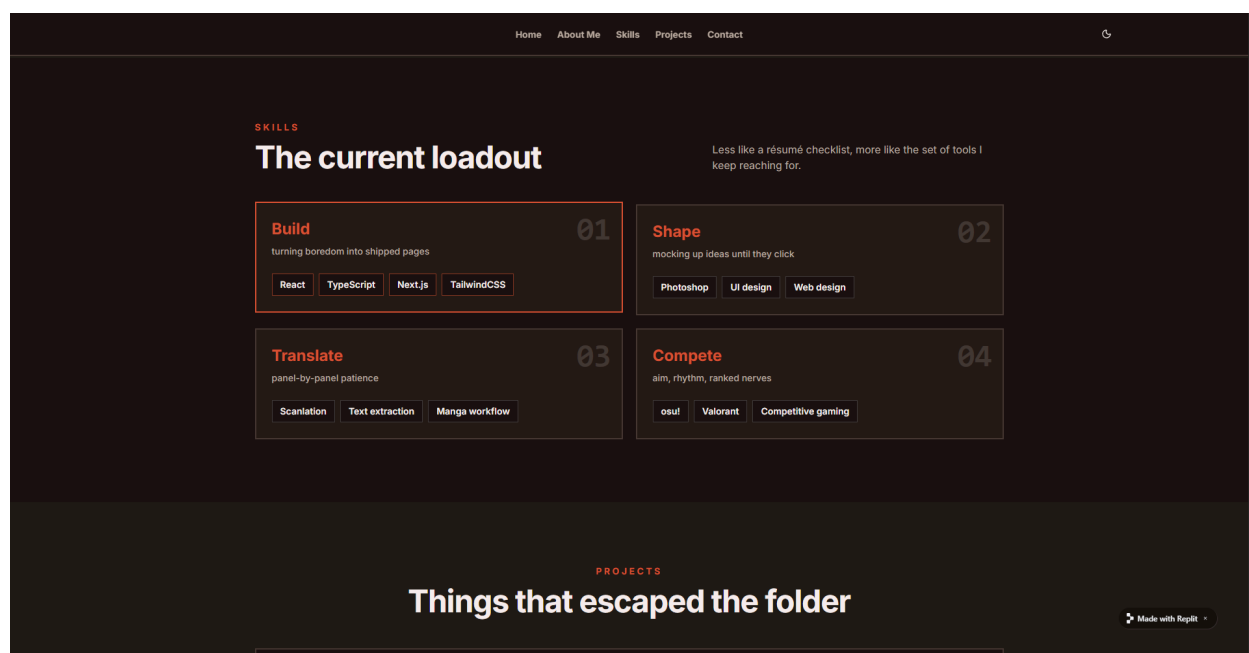

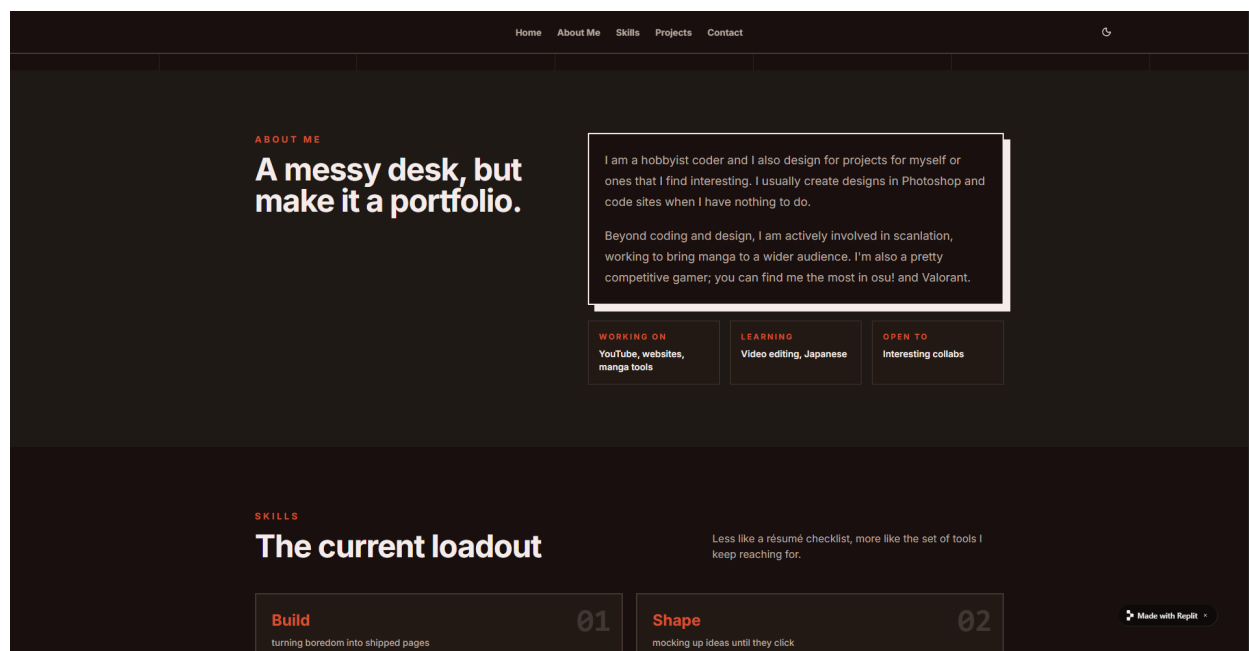

Add a light and dark mode toggle, and do not add branding to the navbar.

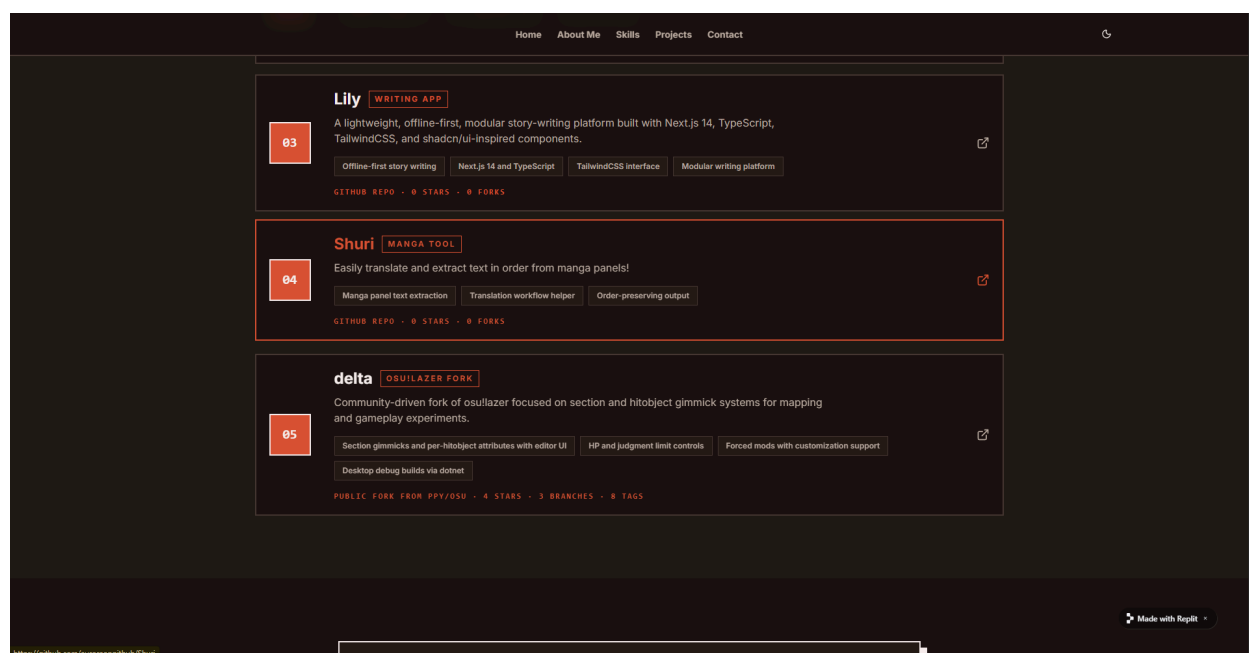

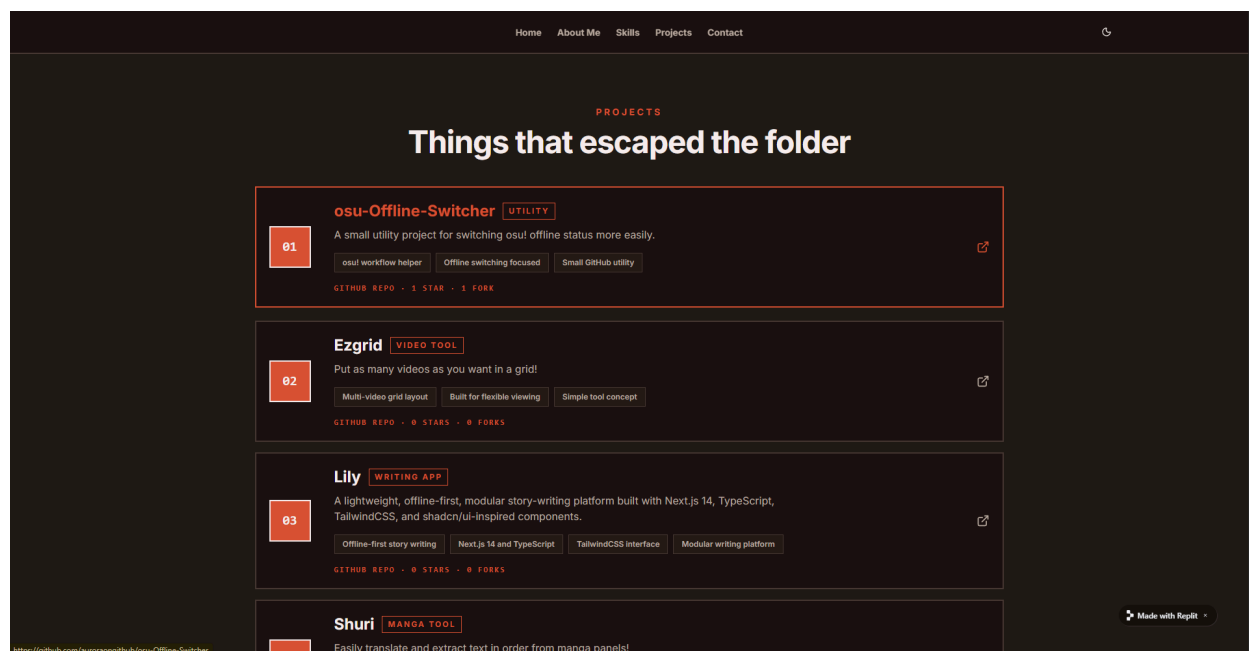

Follow-up Prompts:

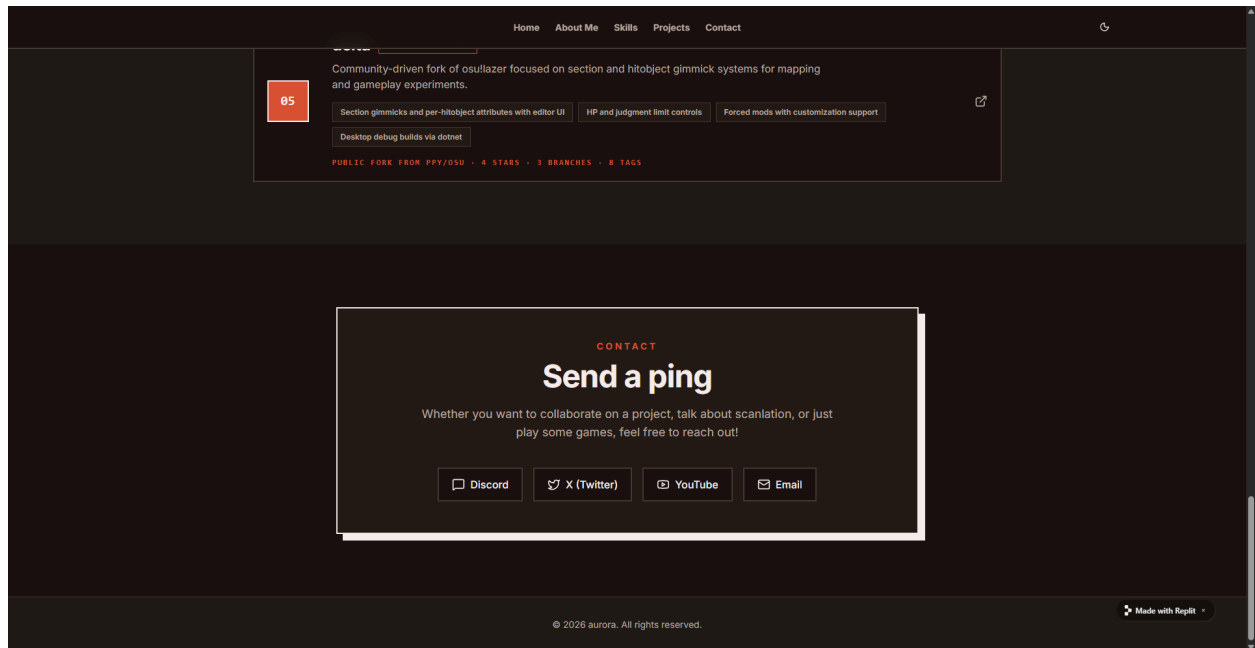

Add more "personality" to the site, be more creative with how you list things and perhaps add more effects to the hero background. Avoid gradients and glows though, and change the primary color to: #d65133

Take the details from this repo and add it to the projects: <https://github.com/deltalazer/delta>

What worked well in creating this website is the fact that I had a reference site to get content from. Though some manual fixing/adjustments were needed to get it to this point, since the first output was a bland, boring blue primary-colored site with no personality and creativity. I learned that nowadays, prompting can be less specific and you can still achieve great results, and you can make it hyper-specific if you really want to.
